Hello, dear friend and thank you for downloading Adult Video Traffic Monetization!

In this short guide, I will show you how to make **\$600** and more per month with adult video traffic. The method is fairly easy. The basic idea is downloading adult videos, watermarking them and then uploading the new videos to various tube sites. The more videos you upload, the more money you will generate. The process can be divided into 6 simple steps. Follow them precisely and you will surely generate more than \$600 a month. At first, you will make \$2-\$3 per day, and as you keep uploading more videos you will get to **\$20 per day, which is \$600 per month!** Nothing stops you from escalating even more by uploading more videos. Just keep uploading until you reach the income you desire.

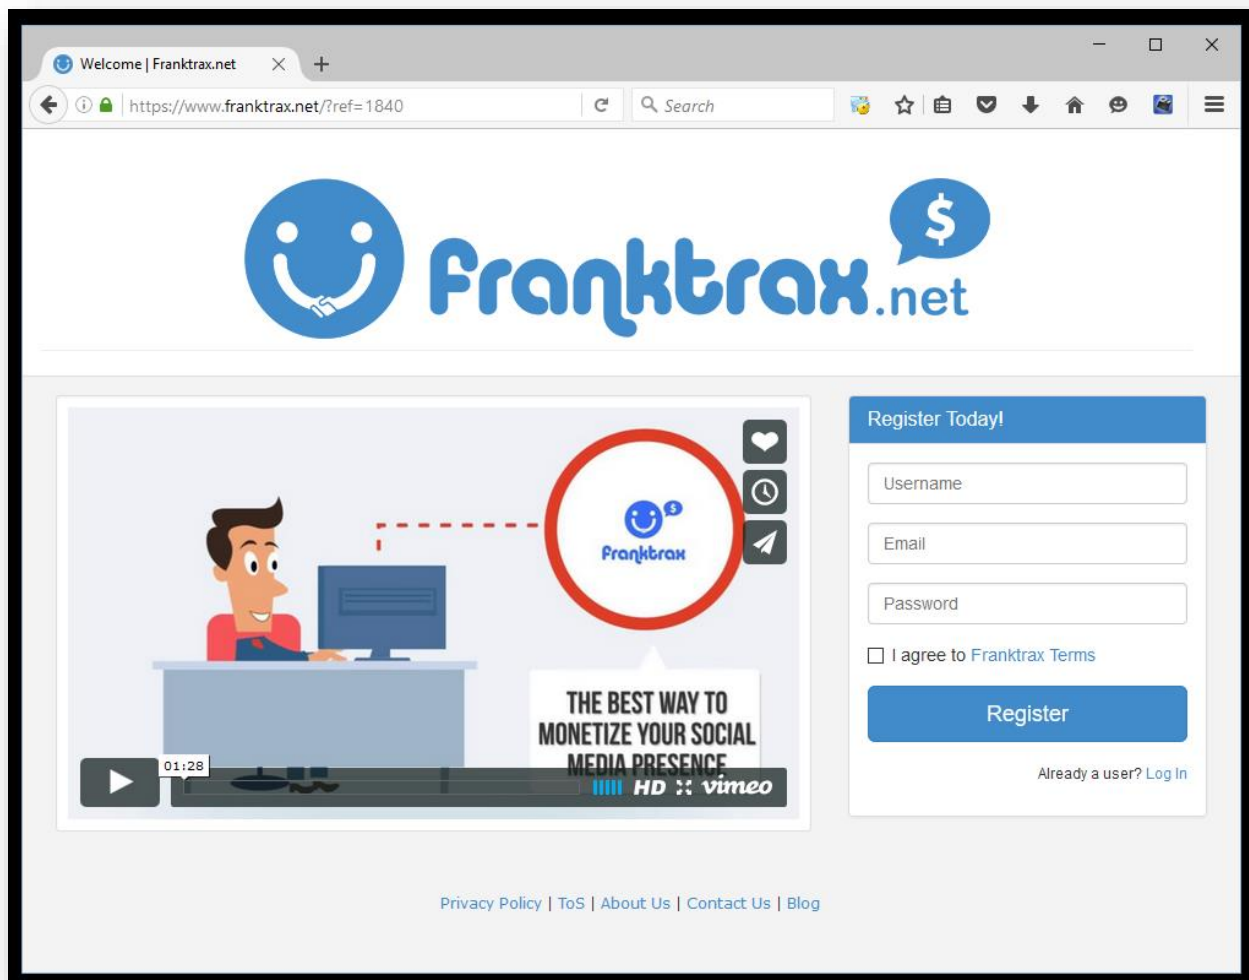

Step 1. Getting the domain, landing page and affiliate offers.

To make money with this method, you will need to have products and services to promote and domain name and landing page for the visitors to go through.

You can get all of that by registering at www.Franktrax.net.

Upon approval, you will get a personal domain name with a custom landing page with the ability to disable it (send your visitors directly to the offer without going through a landing page) and 500+ preloaded CPA offers for 20+ countries.

You need not do anything besides promoting your domain name; **visitors are automatically sent to the best converting offer** according to their geo-location and type of device, so really everything is taken care of for you so you can focus on promoting your domain name.

On the first step of the registration, you have to choose your username, write it down somewhere safe as you will need it in order to login later. Email – **type in your best email** – the email address you are checking most often so you will not miss important announcements. You will receive no spam. Chose a password you will remember because you are going to log in to check your earnings pretty often.

THE BEST WAY TO MONETIZE YOUR SOCIAL MEDIA PRESENCE

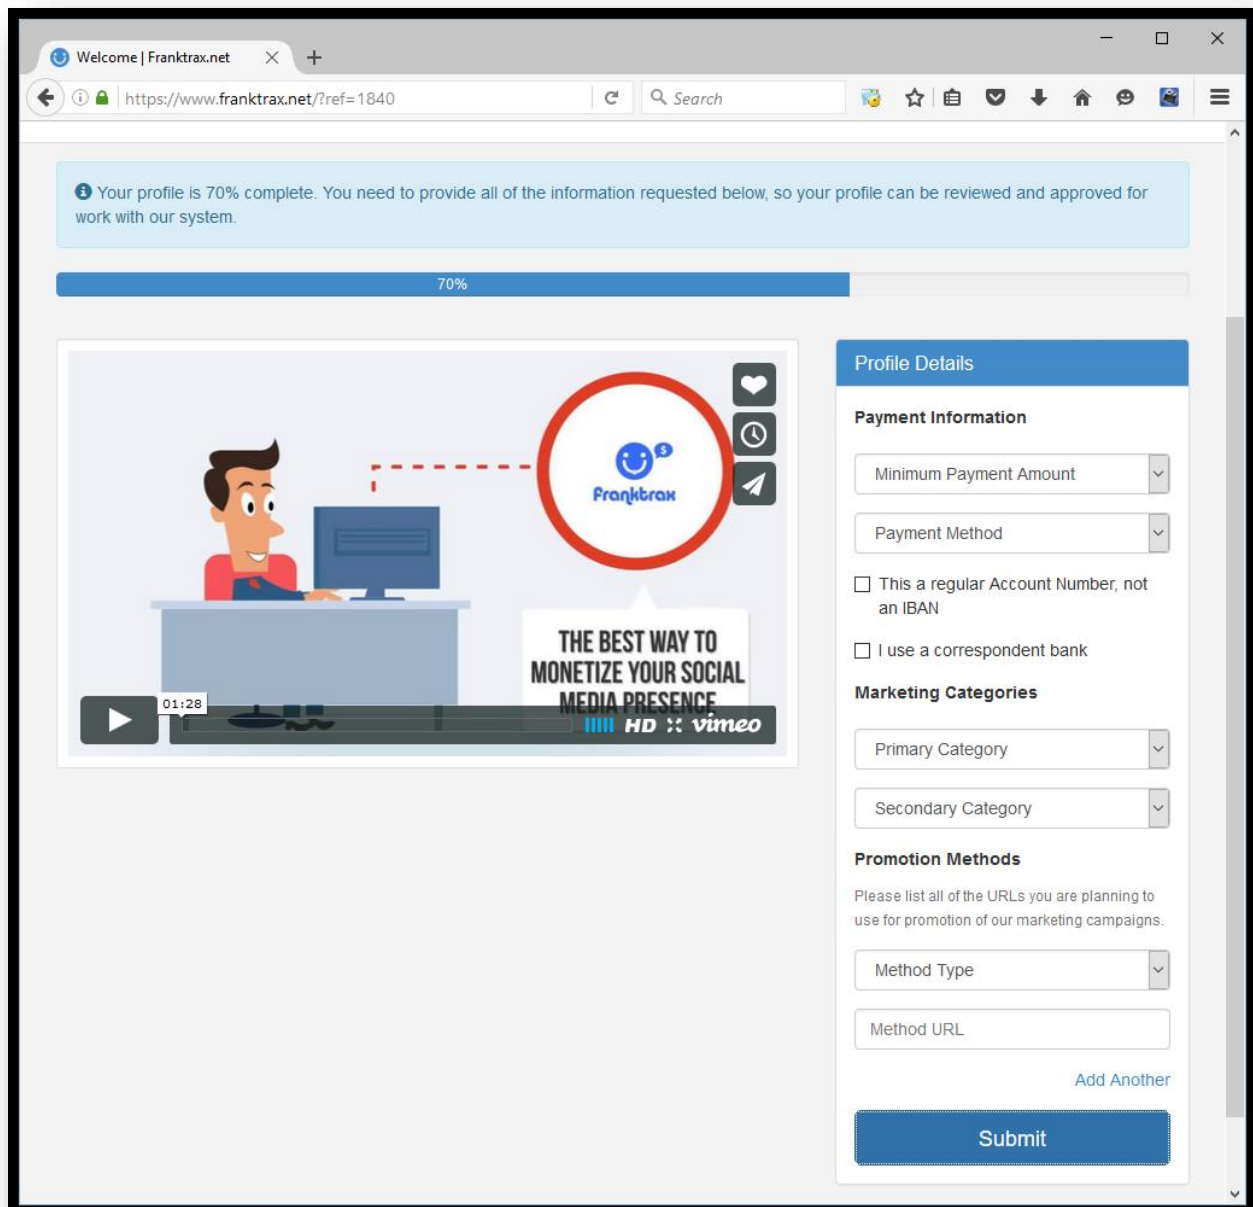

HD :: vimeo

On the next step you have to fill in more details:

- **First Name** – type in your real name as it is written in your passport. You will need to fill a W8-W9 form at some point. This is a document with which you are stating you will pay local taxes in your country.
- **Last Name** – again type in your real name as it is written in your passport
- **Birthday** – you need to fill in your birthday to restore access to your account if you forget your password – you will be asked to type in your

birthday when you request a new password, to verify it is you asking for a new password. So input your real birthday, don't type a fictional one because you will not be able to restore access to your account without knowing the birthday you have typed in during registration.

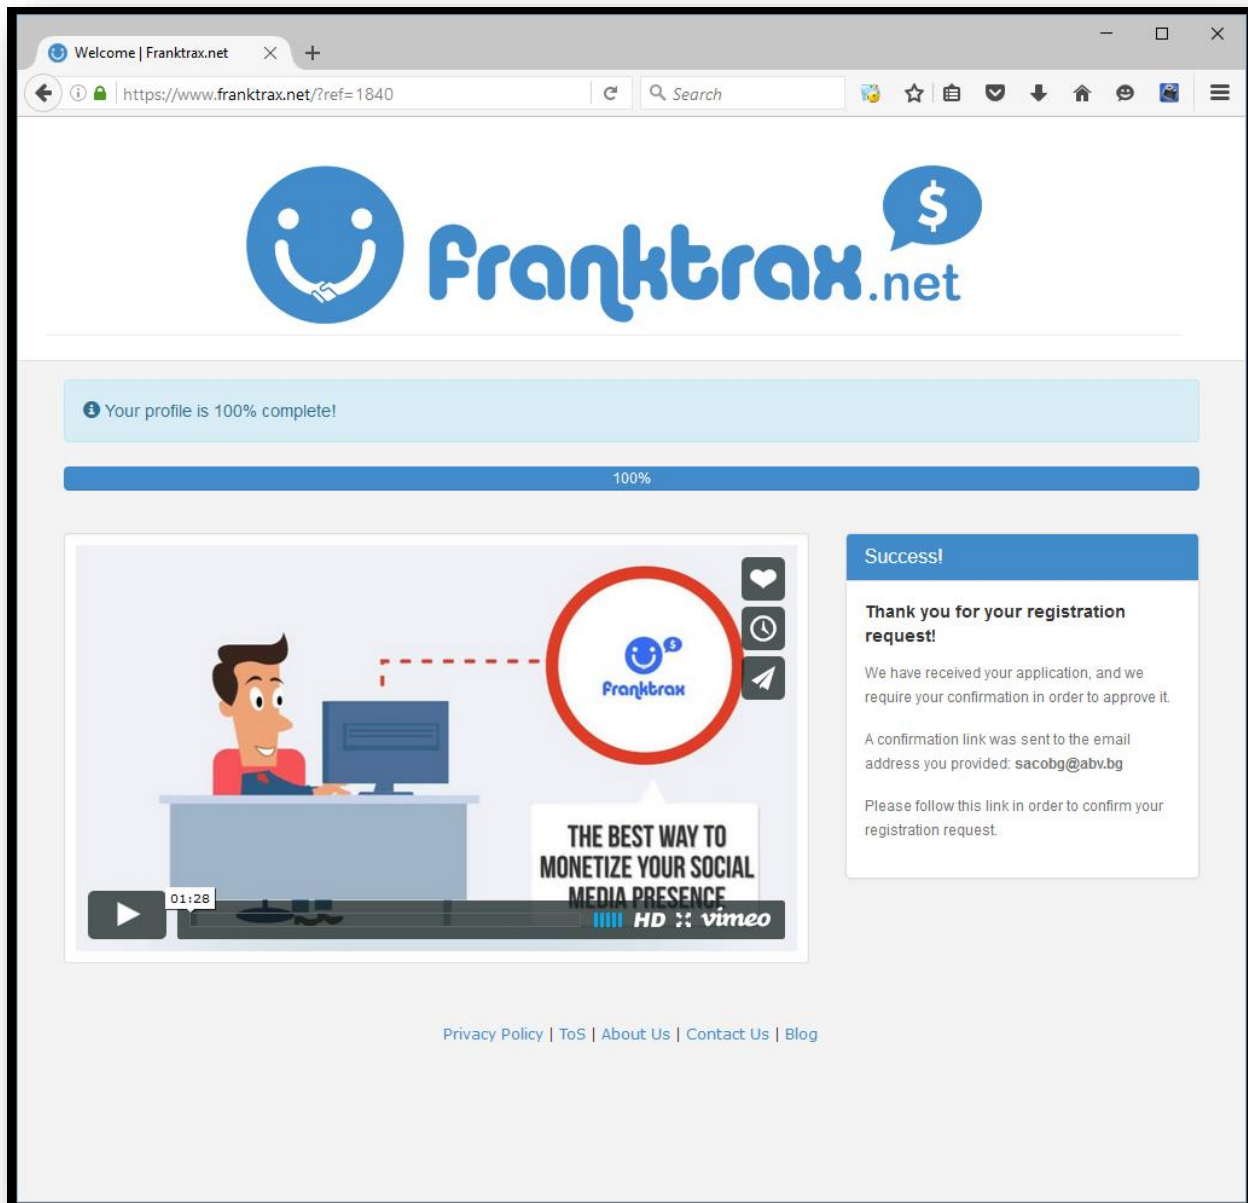

- **Country** – type in the country you are living in.
- **Address 1 & 2** – those are fields for your physical address.
- **City** – type in the city you are living in.
- **State/Province/Region** – type in the state/province/region you are living in.
- **ZIP/Postal code**
- **Skype ID** – type in your personal Skype ID, so your affiliate manager can reach you for news, announcements and help.
- **Facebook Profile** – type in the link to your personal Facebook account.
- **Phone** – type in your phone number
- **Security Question** – security question is needed to verify your identity when you log in from places you haven't log in before. You must choose one of the 5 possible security questions.
 - What was the name of your elementary / primary school?
 - What was your favorite place to visit as a child?
 - What is the country of your ultimate dream vacation?
 - What was your dream job as a child?
 - What is your grandmother's first name?
- **Security Answer** – Use a real security answer for the question you have selected so there is no chance you will forget it. You will need to type this often if you are traveling a lot.

In the final step, you need to specify how you want to get paid, your marketing category and promotion method.

- **Minimum Payment Amount** – this is the amount you need to generate to get paid. If you choose \$2000 this means you will not get a payment before you have generated \$2000.
- **Payment Method** – this is the payment method through which you will receive your payments. The possible options are:

- Skrill
- PayPal
- Paxum
- Wire Transfer
- **Primary Category** – here you should select Adult as we will promote Adult Dating on adult video sites.
- **Secondary Category** – here you should choose Dating.
- **Method Type** – here you should select Adult Video Uploads.

After you fill in everything correctly and click on the Submit button, you should see the screen above. Your registration is still not complete. You must confirm your email address by clicking the confirmation link in the email you have received. After that, you can **contact Franktrax support by Skype: franktrax.net and request a faster approval**; otherwise, regular approval time can take **up to 3 business days**.

Step 2. Downloading videos.

Do a quick Google search and choose a few porn sites to download videos. Do not download from the biggest sites like PornHub, Porn.com, Xvideos, YouPorn to reduce the chance of uploading duplicate videos on them later, choose smaller not so known sites.

- Choose videos with high quality as they are more viewed than the ones with bad quality.
- Choose videos based on the amount of views and likes. If you upload a video that got a lot of views and likes, chances are the same will happen when you upload it to other sites.
- Write down the categories of the video, the tags, description and title in a text file somewhere.
- Watch the videos you upload beforehand and use as many tags and categories as possible.
- The title and the description should contain as much descriptive text as possible. The more well explained your video is, the more people will find it and the more money you will make.

Be careful what videos you download, though. Try not to download videos of famous porn actresses because it is illegal to use their content and you might get yourself a lawsuit. Download only amateur videos because they are submitted to the tube sites without the intent of profit from the uploaders and they will not go through a lawsuit because of you making money from their content.

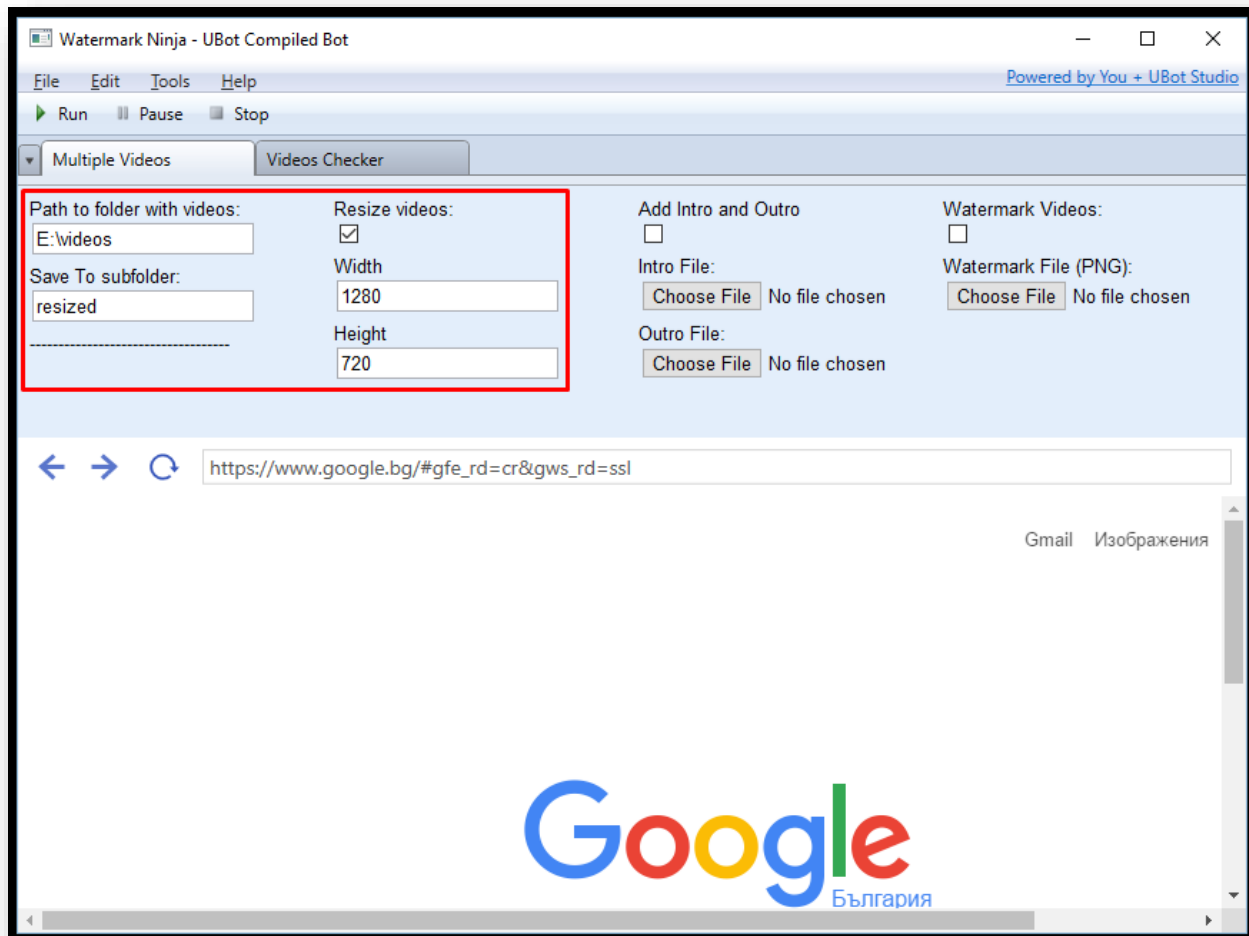

Before searching for and downloading videos check out www.pornmd.com.

Here you can see which terms are searched most in every country, so try to find videos with the most searched keywords.

Step 3. Resize videos (if necessary).

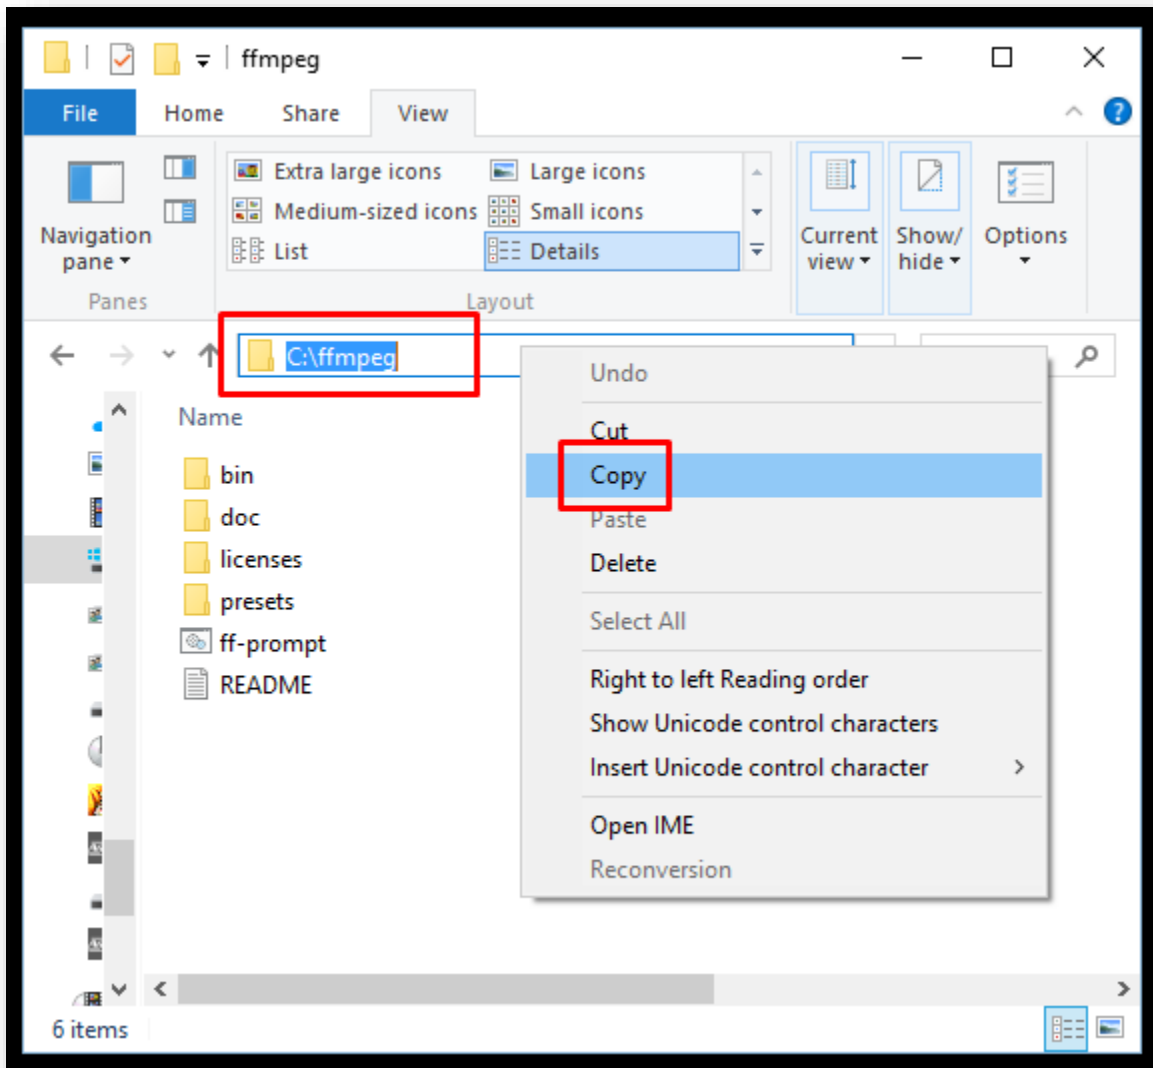

To put the same watermark file on multiple videos, they need to be the same size (with the same resolution). Otherwise, the watermark will appear too small or too big on different-sized videos.

1. **Avoid this step** by only downloading videos in 720p resolution (1280x720).
2. **Watermark Ninja**. This is a Ubot Studio software I have developed for this method. You can download it for free. However, the software is offered as is and there is no support. It is extensively tested, and it works well. [Download from here](#). You will need to download [FFMPEG](#) to use the Watermark Ninja (just download and extract to C:\ffmpeg). Here is how to resize multiple videos with Watermark Ninja:

To use the software, you just need to input some information:

- **Path to folder with videos:** this is the folder of the videos you want to resize. Just browse to the folder with videos and copy its path from the browser like this:

- **Save To subfolder:** This is the folder used by the software to save the new resized video files. It will be in the original folder of the video, and it will be automatically created if it doesn't exist.
- **Resize videos checkbox:** This checkbox controls if the software will perform the resize actions. If you want to resize videos, you need to keep this checkbox checked.
- **Width:** This is the width that all the videos will have after being processed.

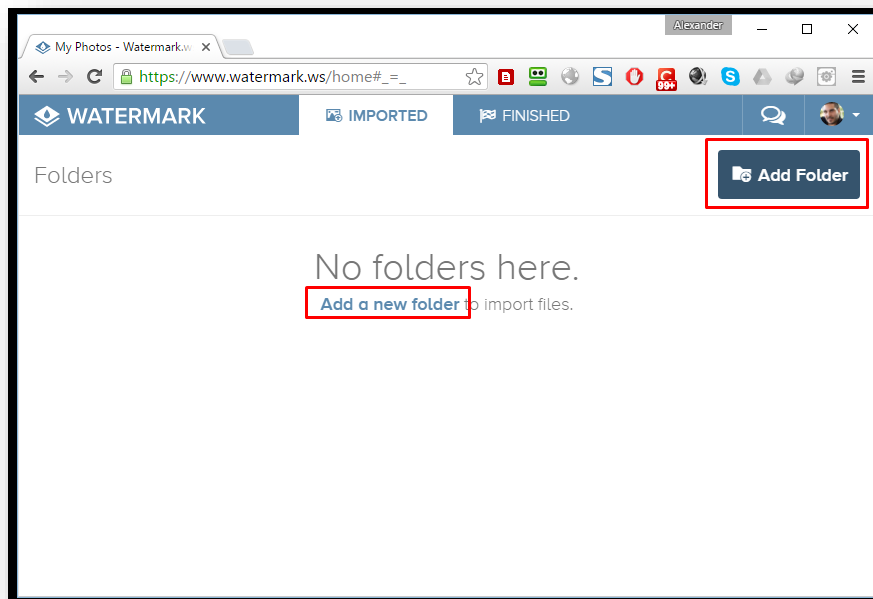

- **Height:** This is the height that all the videos will have after being processed. After setting everything up, **press the Run button above the settings.** When the software is ready with all the resizing, you will see text “All Done” below the settings tab.

Step 4. Watermark videos

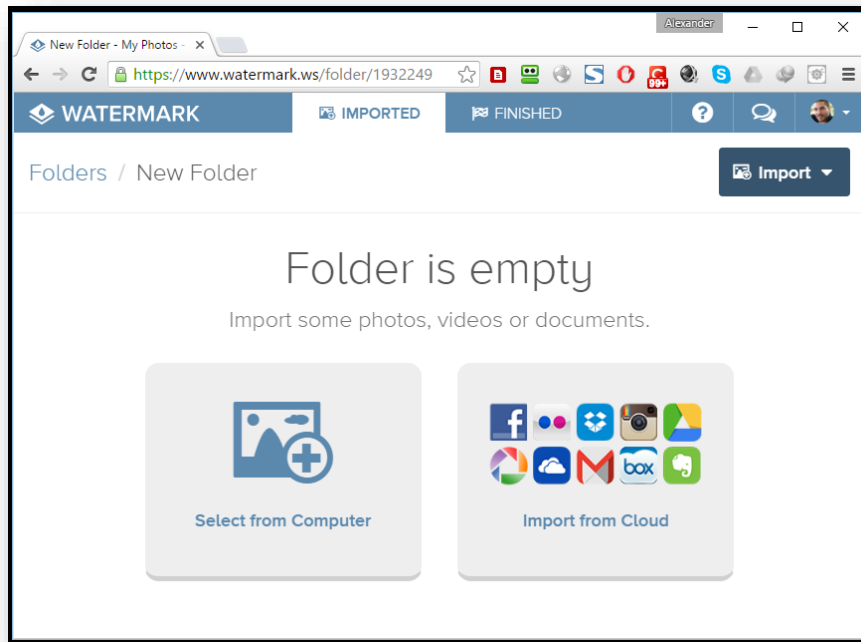

This is the important part. It is what you must do to maximize your earnings.

1. Manual (no-cost) way: <https://www.watermark.ws>.

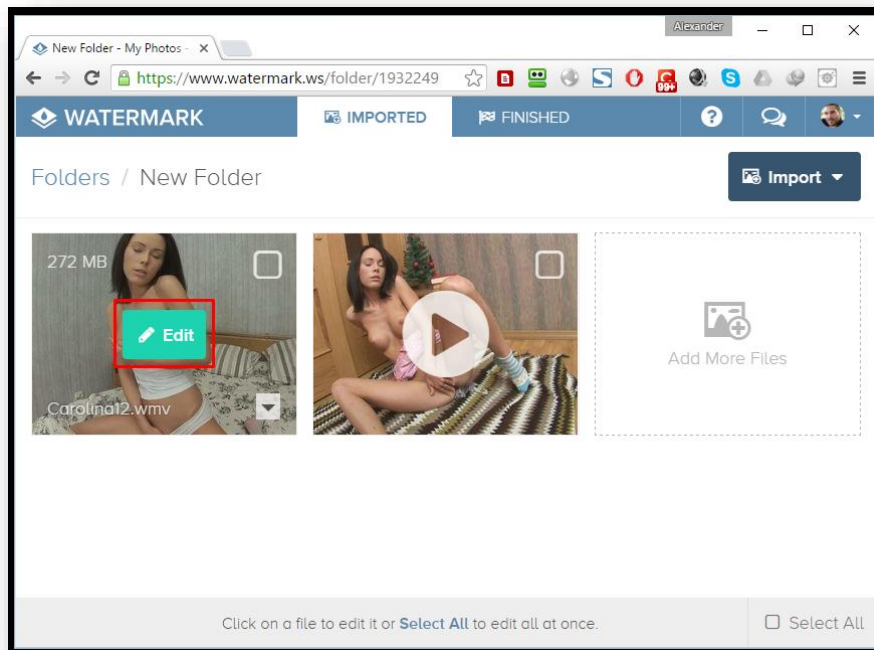

It is a very nice tool that will help you add watermarks to many videos. Both paid and free versions of the tool are available. It's easy to use:

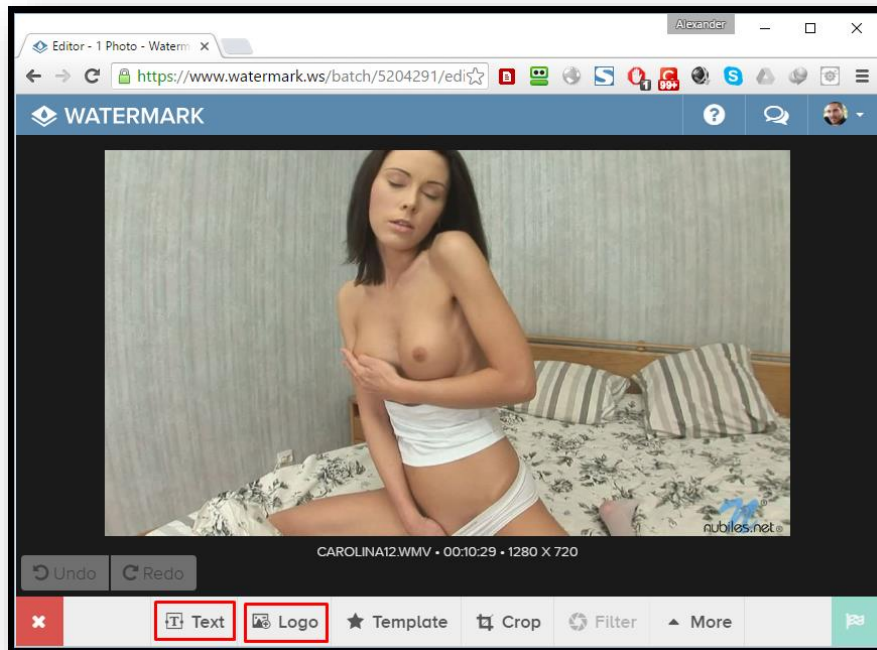

- 1.1. After you sign up for a free account and login, you will see the following screen. Click on Add Folder to create your first folder. You need to do this to be able to upload videos.

1.2. After you create your first folder, you will see the different options for uploading files into it. You can upload files you have downloaded previously to your computer, or you can directly upload files you have online by connecting to your other online accounts.

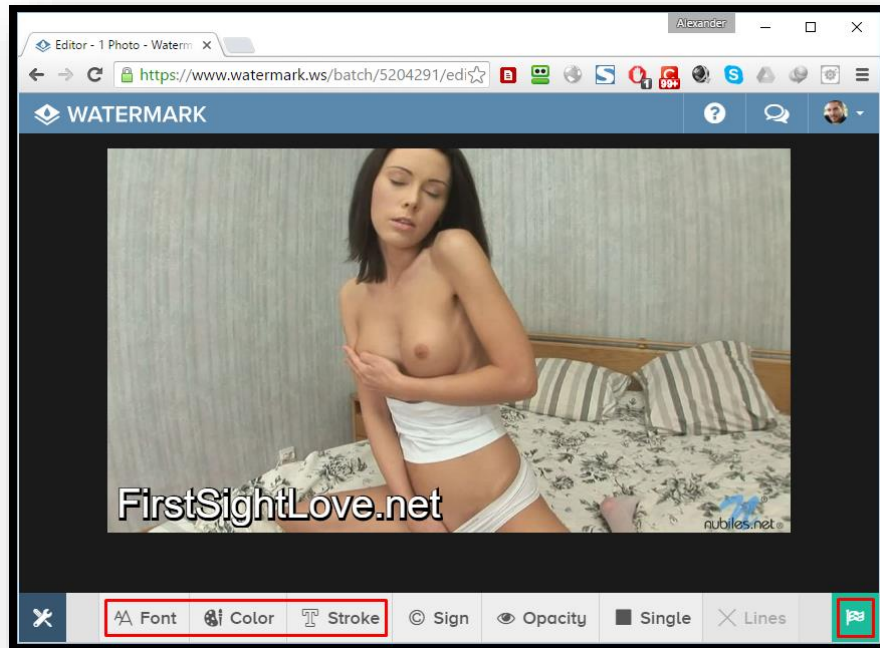

1.3. After you have uploaded a video (videos), click on the button Edit that shows up when you hover the mouse over the video.

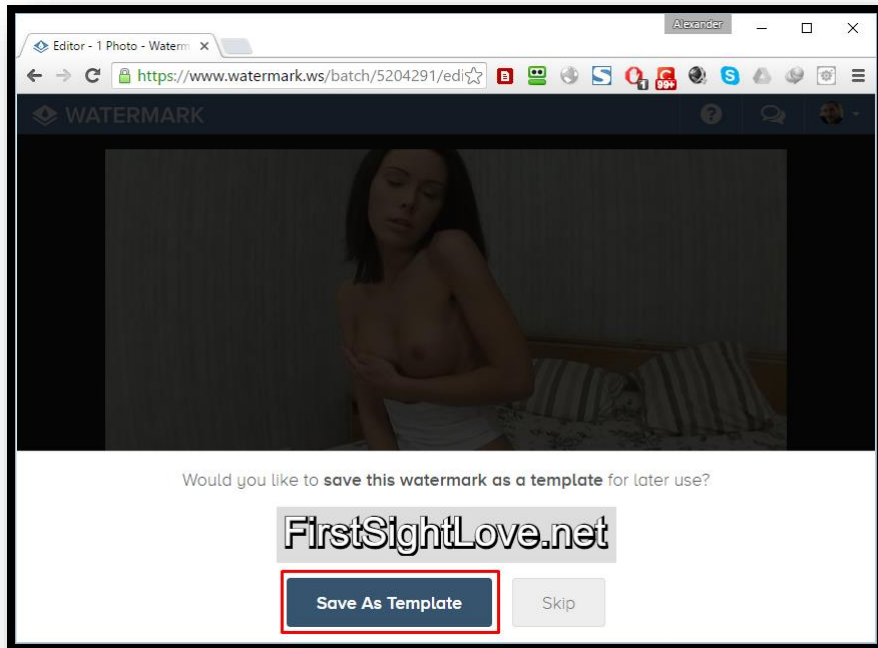

1.4. After the Edit page has loaded click on Text if you want to just type in your domain name or Logo if you want to upload an image with your domain you have previously created.

If you use the logo option, make sure your image is with a transparent background.

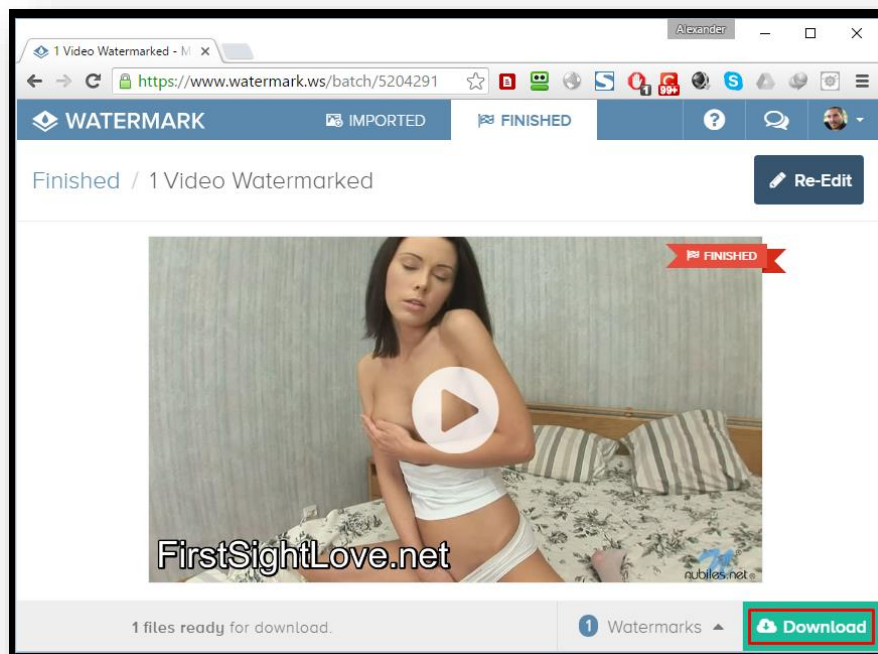

1.5. Use the buttons Font, Color and Stroke to make your watermark visible. Try to make the watermark big but not huge as some sites will reject your videos if the watermark is too big. **One-third of the width of the video is the best option**, the maximum you should use is $\frac{1}{2}$ of the width of the video.

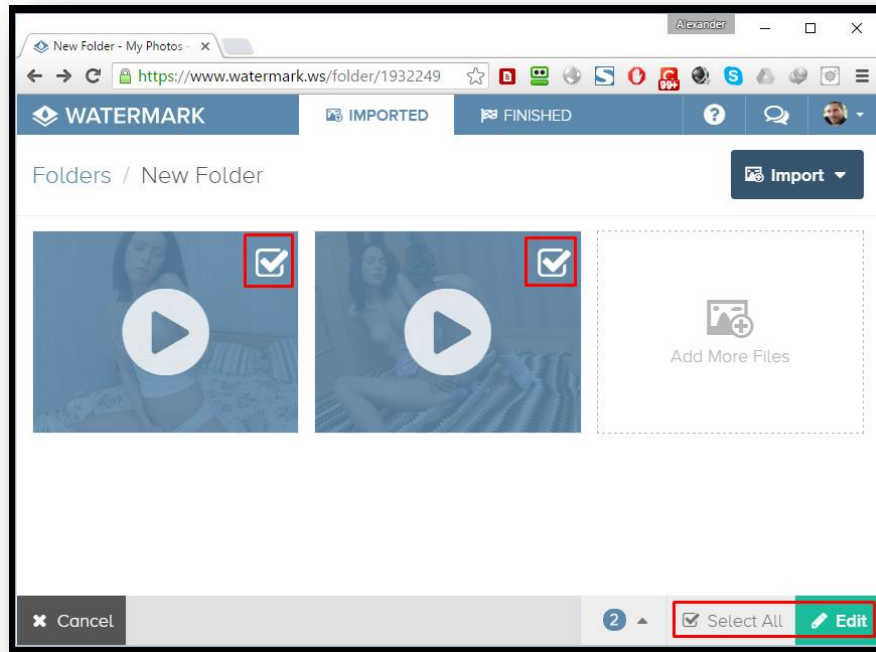

After you are satisfied with how your watermark looks on the video, click on the Flag button in the bottom right corner of the screen and Finish after that.

1.6. After you create your watermark, you will save it as a template. Do this to use that same watermark for other videos.

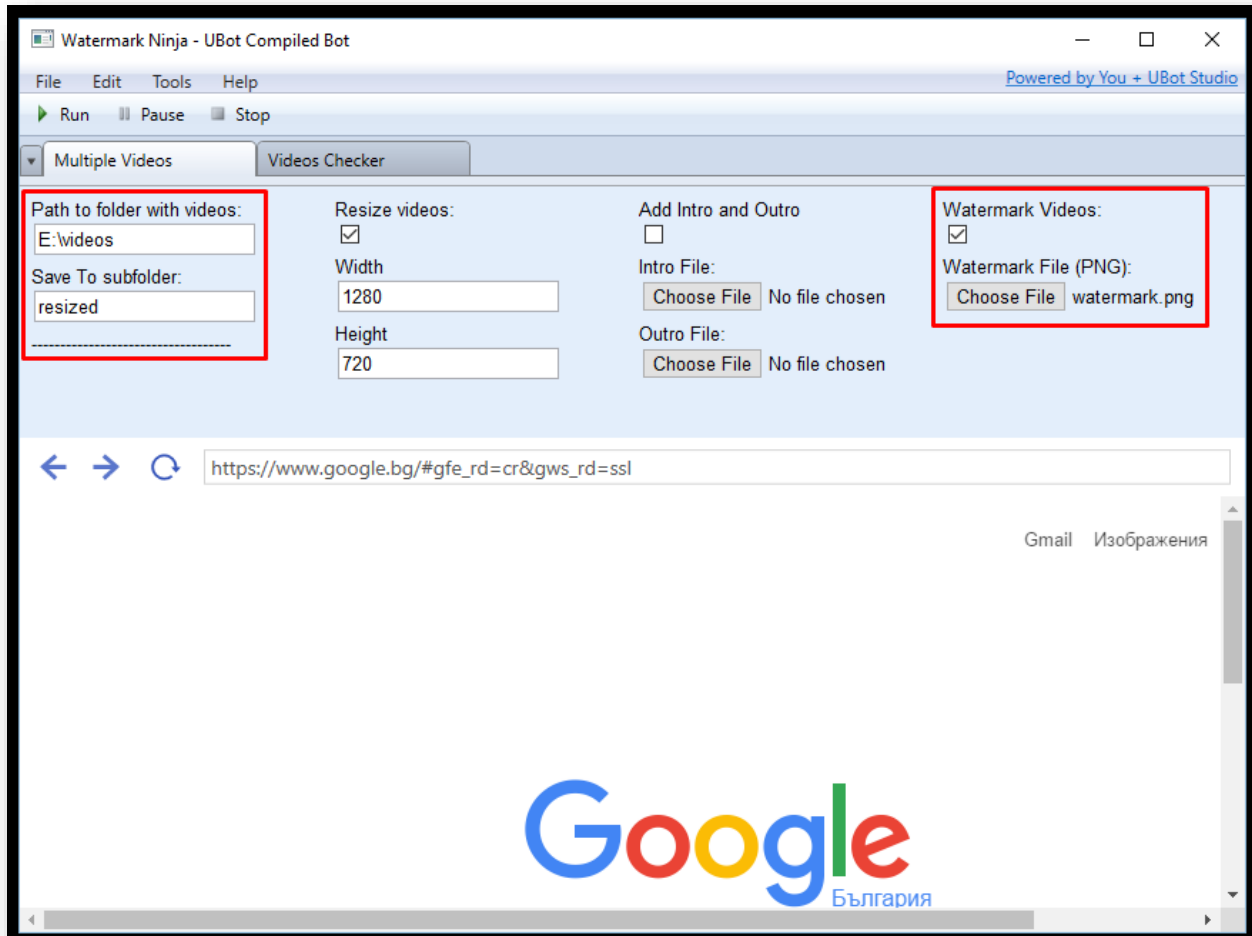

1.7. After a few seconds, your video will be ready for download.

1.8. You can also put watermarks on multiple videos at once. Just select all the videos you want to edit and click on the Edit button. Downloading multiple videos at once is also possible, however, remember they will come in an archive, so you will have to extract them after downloading.

2. Automatic (no-cost) way: Watermark Ninja.

You can use to software to put watermarks on multiple video files at once:

- **The path to the folder with videos:** again this is the folder with videos that the software will use for adding watermarks. If you have resized the videos first, you need to change the path to the folder with videos so the software will use the resized videos. You can also do both operations at once – just check the checkboxes for Resize and Watermark and the software will first change the size of the videos and then add watermarks to all of them.
- **Save To subfolder:** Again the subfolder for the readily processed files.
- **Watermark Videos checkbox:** If checked software will add watermarks to the videos, if unchecked watermark actions will not be performed.
- **Watermark File (PNG):** Here you open the image file of the watermark. The software cannot add text to the videos it has to be an image you have

previously created. You can create a watermark image with www.watermark.ws and download it for use with the software. Alternatively, use photo editing software like Adobe Photoshop or even Microsoft Paint.

Again just hit the button Run and wait for the ALL Done text.

Step 5. Add Intro and Outro to videos.

This is also very important for getting your viewers' attention. Intro and Outro are two short video clips you need to attach to the beginning and the ending of every video you want to upload. You can see an example of a video with an Intro and Outro here:

[Video Link](#)

You can use the Intro for Outro as well or create different videos for each or use a still image for one or both. You can use one of the following texts for script or create one yourself:

1. Hey there, boy! You wanna get together and have some fun? Go to [domainname], sign up and find me!
2. Tired of watching porn? Why don't you sign up at [domainname] and get a real girl? Tonight!
3. Dude, hands off your penis. Go to [domainname] and register today, so you can find a girl to take care of your cock!
4. Heeeey! I just signed up to [domainname] to find a nice guy to fuck. If you think that's you, come join too!
5. You want to find a hot local girl who wants to suck your cock? Sign up at [domainname] and make your dreams come true.

It is better to include your domain name in the script so the video looks more genuine, which will make more people type in your domain name. Here are some sites you can order a video from:

<https://www.sexyjobs.com/>

<http://www.xxxfilmjobs.com/>

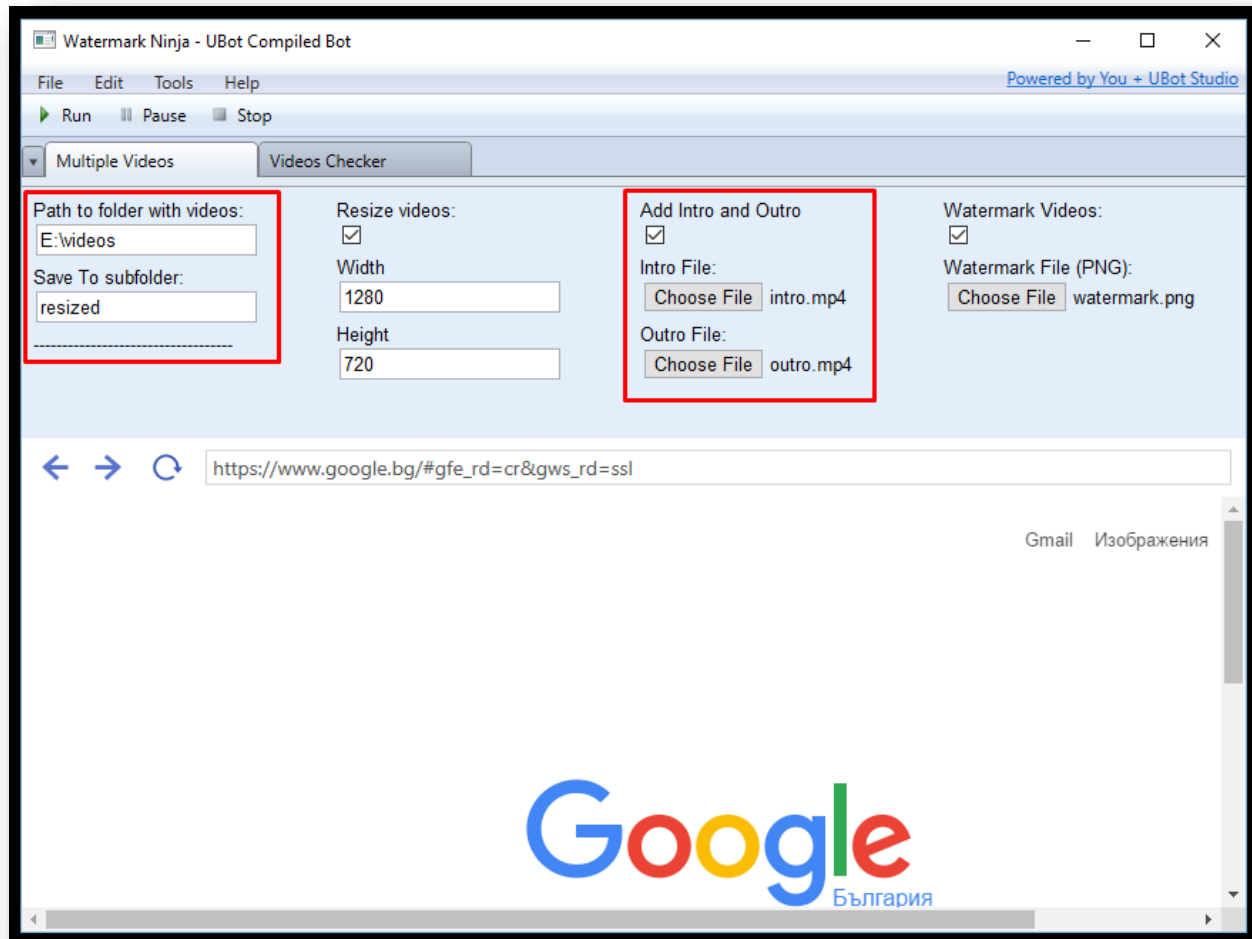

<http://www.adultstaffing.com/>

<http://www.ausmodels.com/>

It will **cost you \$30 - \$50 to have a video of 10-30 seconds made**, which should be enough.

Do not approach porn stars for this because their videos will cost more and less famous women work better for this method because it is used for the promotion of dating sites, so less famous women look more like actual members of the dating sites we will be promoting.

1. Add Intro and Outro with Watermark Ninja:

- The path to the folder with videos: Again this is the source folder. If you are performing the actions separately, make sure you have selected the correct folder.
- Save To subfolder: Again the subfolder for the readily processed files.
- Add Intro and Outro checkbox
- Intro File: The Intro video file that will be added before the actual video.
- Outro File: The Outro video file that will be appended to the actual video.

Another way of merging multiple videos into one is this one:

[Batch-Convert Or Merge An Entire Folder Of Videos With HandBrake](#)

Step 6. Upload videos to multiple sites

Not all adult video sites accept this method of promotion, so a lot delete videos just for having watermarks and some sites even ban your account after uploading just one video with a watermark. Below, you will find a list of adult video sites that accept videos with watermarks and do not delete them or ban your account for uploading such videos. You can start with the first 10 sites if you plan to do it manually.

If you wonder whether there is a software that can automatically upload videos to all of those sites, you are in luck, there is such software and it is called [Tube Site Submitter](#). It costs \$30 per month, and it can upload videos to all of those sites.

When uploading videos, no matter manually or automatically, always:

1. Watch every video and get familiar with the content
2. Input as many tags and categories as possible
3. Name the file you are going to upload as descriptive and attractive as possible
4. Put your domain name at the end of the filename of the video you will upload
5. Put your domain name at the beginning of the description of your video

Remember these because they are essential in getting as much traffic as possible from each video you upload. Some sites will not allow you to have a link in the description or the name of the video so just skip those or make the adjustments needed.
